

Its big, its ugly and its coming our way!

A Massive Solar Park is being proposed on the Farmland at Ware Park Farm.

Permanently changing our landscape.

The Site covers up to 49 Acres with 24 megawatt solar panels and a 15 megawatt battery.

That's over 54,000 Panels

The Proposed Panel Arrays are 4.1 Meters High and Surrounded by a 3Mtr Fence with perimeter CCTV proposed for 40 Years

Generated Power to be consumed by GSK only

The land will be degraded with little potential for biodiversity as half of it will be in permanent shadow, rainwater run-off and cleaning chemicals can create channels in the soil preventing proper dispersal and soil contamination.

Bird and bat deaths are common as they mistake the glass for water.

Transitory animals have their traditional routes blocked.

Protect our Green Belt and Farm land.
